

There are many ways to collect fishes, molluscs or mayflies in the wild.

- For freshwater fish, have a look at ABC Taxa for details how to collect and prepare samples.

http://www.abctaxa.be/volumes/volume-8-manual-atbi/volumes/volume-8-manual-atbi/chapter-22/chapter_22.pdf

- For freshwater fish, there is also the option just to freeze the freshly collected materials and leave all the preservation task to the FREDIE team.

- The vouchers must be stored in a collection which guarantees the access of external scientists and which sent vouchers to other scientists.

- Vouchers collected by the FREDIE team or which can or shall not be stored elsewhere will be stored at ZFMK (fishes), MfN (molluscs) and Lausanne (mayflies).
